(a) excess over the per-M$_a$ optimum
mean THD$_{49}$ excess (pp)
10^2
10^0
10^{-2}
10^{-4}
10^1
10^2
stored angle sets
lookup table + linear interp.
lookup table + SQP corrector
continuity-constrained table
branch-aware table (proposed)
(b) resolution error falls, structural does not
median |excess| (pp), bars 10-90 %
intervals straddling an owner change
intervals inside one branch
R^{-2}
10^{-6}
table rows R
